

ACCESS FROM EVERYWHERE

BRIDGE One connects your ABUS One devices to your Wi-Fi network and to the internet.

It allows you to stay in control of access to your home - no matter whether you're travelling or at work. With its help and the ABUS One app, you can access and manage your smart locks from any location. Receive real-time event notifications and stay up to date with what's happening at your door.

Opening the lock for friends remotely so they can water your flowers? No problem thanks to BRIDGE One. Or do you rent out holiday accommodation and want to send your guests a temporary or unlimited numerical code for your KEYGARAGE One where the keys are stored? You can then set a numerical code in the app from anywhere, send it to the holiday guests and even see in the event log when they took the keys out of the smart key box. If you wish, you can receive a push notification on your mobile device when the key box is opened.

Further smart home options are available if you link voice assistants or set up routines in your smart home system. Just one voice command in your home and the door opens - made possible by the BRIDGE One.

Technologies

- Compatible with all common Wi-Fi standards (IEEE 802.11 a/b/g/n/ac; 2.4 GHz, 5 GHz)
- Requires an internet connection and a free socket (230 V) at a maximum distance of 5 metres from the ABUS One product to be controlled
