A DANGER FORESEEN IS A DANGER AVOIDED

Our lockable window handle for profile half cylinders offers you the perfect combination of burglary protection and child safety. It is suitable for all inward-opening windows and easily replaces the existing window handle.

Tested and certified in accordance with DIN 18267, the handle provides protection against twisting or tearing off with a pressure resistance of 200Nm. In addition, the lockable function prevents children from opening the windows unintentionally - significantly reducing the risk of accidents. The profile half cylinder only needs to be pressed in briefly to lock the FG500 HZ, but the key is always required to open it.

This window handle can be combined keyed alike with other profile half cylinders (10/30). This makes it ideal for use in private or public key systems and offers the option of operating several windows and doors with a single key - a feature that is practical in facilities such as nurseries, for example. With the FG500 HZ, you ensure that only authorised persons can open the window with the key.

Installation is quick and easy: the FG500 HZ is installed with a square bolt, which is adjustable and therefore suitable for different window profiles, and the supplied screws.

The FG500 HZ is available in silver and white variants.

Technologies

- Individually adjustable, secured square bolt, 30 - 48 mm in length
- Square bolt 7 mm, screw distance 43 mm

FG500 HZ white without cylinder

Seite 2 von 2

- In accordance with DIN 18267 class 2
